VisCHI 2019

1st International Conference on Visualization and Computer-Human Interactions

Doha, Qatar - November 2019

Call for posters and Demos

The International Conference on Visualization and Computer-Human Interactions (VisCHI) is the first event of its kind in the region. It will bring together researchers and practitioners from the fields of Visualization and Human-Computer Interaction.

In many application domains, complex systems and data have to be analyzed and controlled through the collaboration between humans and machines. The goal of the conference is to support domain experts in these tasks, to expose, discuss and share new concepts, methods, and practices.

The VisCHI conference will allow sharing knowledge and practice between experts and practitioners by a set of keynote and invited talks by speakers from academia and industry.

The VisCHI organizing committee solicits posters and demonstrations from academia, industry, and government institutions to expose original work covering both theory and practice in the following fields:
- Data Visualization,
- Information Visualization,
- Scientific Visualization,
- Visual Analytics,
- Human-Computer Interaction,
- User Experiments,
- Artificial Intelligence,
- User-Centric Design,

or other fields concerned with techniques that support human-machine interactions to analyze and control complex systems such as: energy, security, education, and health.

The abstracts will be made available on the website of the conference.

Submission guidelines
Formatting instruction: The poster or demo proposal should be one page abstract including title, author names, affiliation and coordinates, abstract, pictures and references.
The proposal should be sent to vischiqatar@gmail.com (or add google form link here) **before August 30, 2019**

Notification of acceptance/rejection will be sent by **September 15, 2019**.
