Call for Posters and Demos
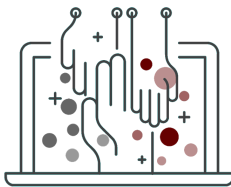

VisCHI 2019

1st International Conference on Visualization and Computer-Human Interactions
https://vis.qcri.org/vischi2019/

Doha, Qatar - 25-26 November 2019

The International Conference on Visualization and Computer-Human Interactions (VisCHI) is the first event of its kind in the Middle-East.

In many application domains, complex systems and data have to be analyzed and controlled through the collaboration between humans and machines. The goal of the conference is to support domain experts in these tasks, to expose, discuss and share new concepts, methods, and practices.

The VisCHI conference will allow sharing knowledge and practice between researchers, experts and practitioners by a set of keynote and invited talks by speakers from academia and industry.

The VisCHI organizing committee solicits posters and demonstrations from academia, industry, and government institutions to expose original work covering both theory and practice in the following fields:

- Data Visualization,
- Information Visualization,
- Scientific Visualization,
- Visual Analytics,

- Human-Computer Interaction,
- User Experiments,
- Explainable Artificial Intelligence,
- User-Centric Design,

or other fields concerned with techniques that support human-machine interactions to analyze and control complex systems such as: energy, security, education, and health.

The abstracts will be evaluated based on their novelty and relation to the topic of the event. Abstracts and final posters will be made available on the website of the conference.

Submission guidelines

The poster/demo proposal should follow the template on https://vis.qcri.org/vischi2019/posters.html.
Submit your abstract as **.pdf** to vischiqatar@gmail.com **before August 30, 2019**
Notification of acceptance/rejection will be sent by **September 15, 2019**
